

Amos | Connect

An Integration as a Service Solution Built Specifically for Education

Why Choose Amos | Connect?

Amos | Connect is an end-to-end integration as a service solution which handles both legacy and modern integration methods. We help unlock the power of the SITS Stu-Talk component while taking ownership and responsibility of your data flow across multiple applications.

Clear the Path to the SITS Cloud

For a number of reasons, legacy direct database or file transfer integrations are not compatible with SITS in the cloud. The prospect of unpicking these existing integrations and modernising the SITS data transfer to use Stu-Talk might feel overwhelming and prevent an institution from achieving their digital transformation goals.

A Solution Designed Specifically for Education Institutions

Our integrations aren't generic. We've designed Amos | Connect specifically to solve major problems that have been affecting education administrations for decades.

API-Driven Platform That Drives Connectivity

Accessing and processing data is your top priority. Our integration allows you to drive more value from your existing data, as well as unlock new data streams through improved business processes.

Flexible Solution That Can Integrate With Legacy Systems

Your legacy systems are deeply embedded in your institution. We can work with and build upon your existing legacy systems, providing you with an agile solution that doesn't require complete change.

Cloud-Based and Scalable

Your needs evolve over time, so does Amos | Connect. You can scale up your solution based on your actual needs. There's no need to pay for features you aren't ready to use.

We've Got a Feature for That

Powerful Integration Framework

A pre-built solution that's easy to implement, comes with support, and works with the SITS Stu-Talk component.

Education Data Model (EDM)

EDM works to translate data into a standardised language that is compatible with other solutions in your ecosystem.

API Hub

Access a wide variety of APIs that can streamline integration and provide connectivity with popular systems.

Cloud Infrastructure

Amos | Connect is a cloud native solution hosted on AWS and can integrate together both cloud and on-premise systems.

End-to-End Encryption

Stay protected with a fully encrypted integration platform that keeps your data secure as it moves between your systems.

Real-Time Data Flow

Improve employee and student experiences with real-time data flow between the essential services in your system.

Enterprise Integrator

Our WSO2 Enterprise Integrator lets you control your data flows through an intuitive low-code integration solution for cloud and container-native projects.

Management Console

Highly visual console to manage and troubleshoot your integrations. If systems go offline, you can easily restart the message queue.
