

# A modern and easier way to integrate Quercus with your best in class applications

## Leverage more value from your Quercus investment

This solution is popular amongst education institutions that are looking to improve their ability to manage the student experience, implement a powerful self-service solution, take advantage of analytics and reports, and scale the platform as they grow.

Quercus is a robust platform that's great for educational administrations looking to improve their flexibility.

But as feature-rich as Quercus is—you need to leverage the native Quercus APIs to maximise your investment.

## Meet Amos | Connect—Are you ready to drive more value from your essential systems?

**Amos | Connect** can help your organisation get the most out of Quercus by implementing powerful integrations that allow your systems to communicate, share data, and uplift the student experience.

The Amos team has decades of experience working in education. We understand how education administrations think, the types of problems they face, and the challenge of getting your systems fully integrated.

'Having Amos Connect at ICMP has really taken the burden of point-to-point integration from our staff team. As an institution we can re-focus our resources and allow the technology to do its job, safe in the knowledge that student data is secure, and their important course and module information is where it's supposed to be. We're really satisfied with how this ongoing partnership is working and the care that has been shown by the Amos team throughout the journey.'

**Harri ap Rees**  
Registrar and COO, ICMP

Put our expertise to work to get the most value out of your Quercus investment

# How can Amos | Connect help you unlock the power of Quercus

## Decades of experience building Quercus integrations for education

Quercus is only as good as the integrations that power it. **Amos | Connect** was designed specifically for educational institutions to help them get their data systems synced and communicating.

## Leverage more value from your Quercus investment

Quercus is popular amongst education institutions that are looking to improve their ability to manage the student experience, implement a powerful self-service solution, take advantage of analytics and reports, and scale the platform as they grow.

## Visualise your data flow with the integration dashboard

A default Quercus implementation may require up to four integration messages to ensure that data has been sent to the right source. **Amos | Connect** reduces this problem, using its API Library to present usable end points to your other campus systems.

## Build integrations that enhance your workflows

Does your institution have a specific way that it likes to work? The Amos team will work with you to define the flow of your data, implement integrations that work with your processes, and support the connectors for you.

## Unlock the power of Quercus Message Link

Getting your systems to communicate properly is a challenge. **Amos | Connect** simplifies Quercus Message Link by aggregating the message API through the use of connectors that connect to your other systems.

**Amos will simplify how your institution interacts and drives value from Quercus**
